

Assignment #3 – Backend Development: Billboard

BILLBOARD

The Assignment contains the following subjects:

- Python Django
- jQuery, AJAX, CSS, HTML

Submitting instructions:

Push the full folder hierarchy of the project to your own repository on GitHub.

Deploy the application to heroku. Use [this](#) repository from heroku to start your project!!

<https://github.com/heroku/heroku-django-template>

Please add the following in hive:

- A link to the repository
- Free text - a list of implemented features. Stuff that you found hard to implement, known bugs and your review of this assignment

Approaching the assignment

- **Go over the supplied mockups. Important!**
 1. Think what parts you need to generate dynamically.
 2. Create a flow chart for the user interaction.
 - a. For each step in the flowchart, break it down and understand what part of your code should be doing it – FE, BE
 - b. Understand what functions you will need for each step
 3. Plan the models of Django:
 - a. Think about the models you will need, and what will be the information you will save in each model
 4. Focus efforts on Django and FE.
 5. Try to make it as close to a complete product as you can.

Basic Requirements

See in the attached mockups.
